

Stoller Melon Program

X-Cyte™

X-Cyte is an EPA-registered plant growth regulator and yield stimulant containing a key plant growth hormone – cytokinin as kinetin. X-Cyte ensures more carbohydrate storage capacity for enhanced uniformity, density, quality and yield. Additionally, X-Cyte helps plants produce grain and fruit with higher density to increase final quality and yield.

Sett

Stoller's Sett is formulated from calcium and boron. Sett is specifically designed to maintain the structural strength and health of leaf and fruit cells. Sett is designed for foliar application and can mix with some fertilizers and pesticides.

Harvest More® Urea Mate

Harvest More® Urea Mate is the most complete, proprietary nutrient product on the market today. This soluble fertilizer can be applied through soil, foliar and irrigation methods. One product with 11 key nutrients your crop needs for optimal growth throughout the season.

Apply these products every 14 days starting at vine run (this will cover vegetative growth, flowering, fruit set, and fruit development stages).
